

# Is Your Farm Ready for a Foreign Animal Disease?

## How to Become Secure Pork Supply Ready

In the event of an African Swine Fever (ASF), Foot and Mouth Disease (FMD), or Classical Swine Fever (CSF) outbreak in the United States, state and federal regulatory officials will restrict animal movement to slow or stop the spread of these foreign animal diseases (FADs). If your animals are located in a disease control area, you will need to meet certain criteria (for example: movement records and biosecurity measures in place) in order to request a permit to move your animals. Guidance for requesting movement permits can be found in the Secure Pork Supply (SPS) Plan.

Iowa State University Swine Extension wants to help producers understand what the state and federal response might include and how the resources in the SPS Plan can help producers prepare for a foreign animal disease outbreak. If we can help individual producers prepare, the industry as a whole is more prepared.

Opportunities available include a variety of interactive workshops, webinars, and individual assistance on enhanced biosecurity plans and site maps.

### Workshops/webinars:

#### FAD Prep 101 (2 hours; in person or webinar)

Describes what to expect during a foreign animal disease outbreak and the resources available in the SPS Plan to help producers prepare. Topics include:

- National movement standstill
- Outbreak epidemiological investigation
- Quarantine and control areas
- Mass depopulation and disposal options
- How does Secure Pork Supply addresses business continuity during an FAD outbreak

#### FAD Prep 201 (3 hours; FAD Prep 101 is a prerequisite)

Explains the resources in the SPS Plan and how to apply it to your individual farm. Topics include:

- Ensuring you have a valid premises ID number
- Keeping accurate movement records of animals, people, equipment
- Writing your enhanced biosecurity plan and creating a site map
- Training caretakers in enhanced biosecurity
- Monitoring for a foreign animal disease on your farm (ASF, FMD, CSF) and knowing who to call

#### Individual or small group assistance with developing a SPS Plan for your operation. (FAD Prep 101 is a prerequisite).

- An ISU Swine Extension Specialist will visit the farm and educate producers and caretakers on how to develop and implement the SPS Plan on your farm.

### WORKSHOP DATES & LOCATIONS

FAD 101 | 10 am - noon

FAD 201 | 12:30 - 3:30 p.m.

July 29 Le Mars, IA

July 30 Independence, IA

Aug 6 Garner, IA

Aug 7 Washington, IA

Aug 13 Marshalltown, IA
